

Professional HD H.264/H.265 HDMI Video Encoder

TBS2603/TBS2630 User Guide V1.1

1. Overview

TBS2603/TBS2630 H.265/H.264 HD HDMI encoder is a professional high-definition video coding box, which supports HTTP, UDP, RTP, RTSP, RTMP, ONVIF Protocol. TBS2603/TBS2630 supports MPEG-4 AVC/H.264/H.265 High Profile code format input and dual stream H.264/H.265 format, audio AAC format output.

1.1 Technical Specifications

> Video

Input	1x HDMI (1.3a)
HDMI Resolution	1920×1080_60i/60P, 1920×1080_50i, 1280×720_60p, 1280×720_50p and below
Encoding	H.264/AVC Main Profile/High Profile ; H.265/HEVC Baseline Profile; Audio AAC
Data Rate	0.8Mbps~12Mbps
Rate Control	CBR/VBR
GOP Structure	IBBP
Advanced Pretreatment	De-interlacing, Noise Reduction, Sharpening

> Audio

Encoding	AAC, MP3
Sampling Rate	Auto
Bit-rate	48K/64K/96K/128K/160K/192K/256k
Sampling Precision	16bit
Data Rate	64Kb/s ~ 384Kb/s

> System

Ethernet/RJ45	1000 Base-T Ethernet interface
Protocol	HTTP, UDP, RTP, RTSP, RTMP, ONVIF
Control Interface	WEB

> General Spec

Dimensions	115mm*75*25mm
Weight	170g(NW), 560g(GW)

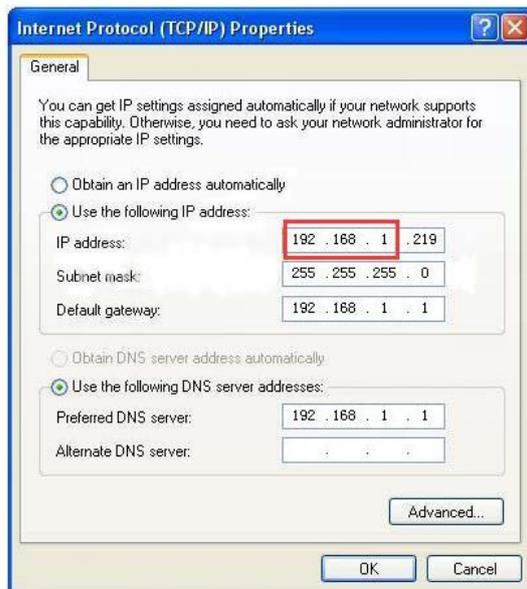

Working Temperature	0~45°C
---------------------	--------

2. IP setting

> Default IP for TBS2603/TBS2630 HDMI Encoder is **192.168.1.168**.

> Your computer' IP address must be **192.168.1.XX** for connecting with Encoder.

(Note: "XX" can be any number ranging from 0 to 254 except 168.)

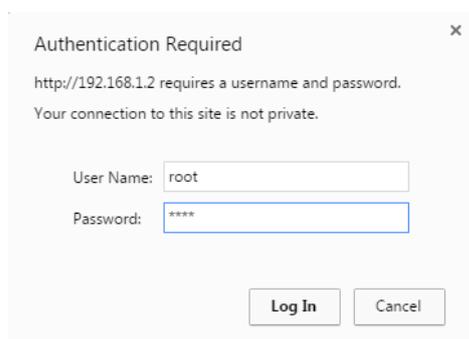

2.1 Connect to TBS2603/TBS2630

> Connect computer to TBS2603/TBS2630 with network cable directly.

> Open IE browser, input "192.168.1.168" to visit TBS2603/TBS2630 HDMI Encoder's WEB operate interface.

User Name: root

Password: root

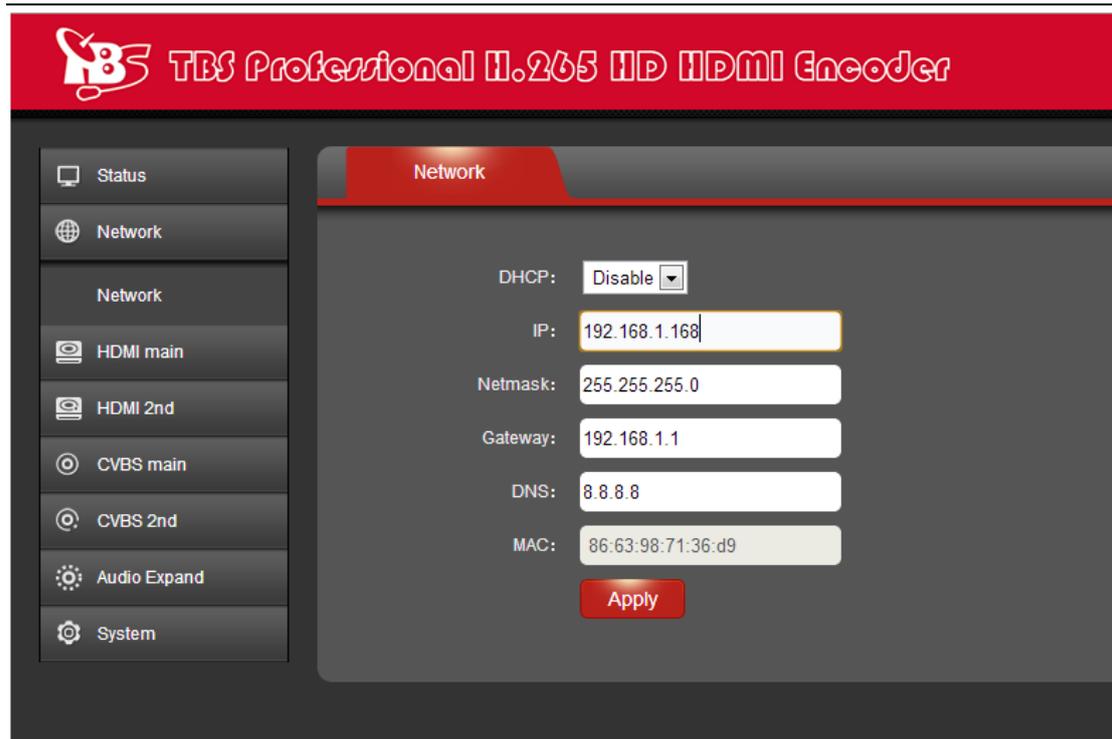

2.2 TBS2603/TBS2630 Network Setting

> Set TBS2603/TBS2630 IP address according to your LAN IP. For example, if your LAN IP is 192.168.8.65, TBS2603/TBS2630 IP should be set to 192.168.8.XX ("XX" can be any number ranging from 0 to 254).

Note: TBS2603/TBS2630 should be in the same Network Segment as your LAN IP.

> Click "Apply" button to save the new setting.

The screenshot shows the web interface for the TBS Professional H.265 HD HDMI Encoder. The top navigation bar is red with the TBS logo and the product name. On the left, there is a sidebar menu with options: Status, Network, Network, HDMI main, HDMI 2nd, CVBS main, CVBS 2nd, Audio Expand, and System. The main content area is titled 'Network' and contains the following configuration fields:

- DHCP:
- IP:
- Netmask:
- Gateway:
- DNS:
- MAC:

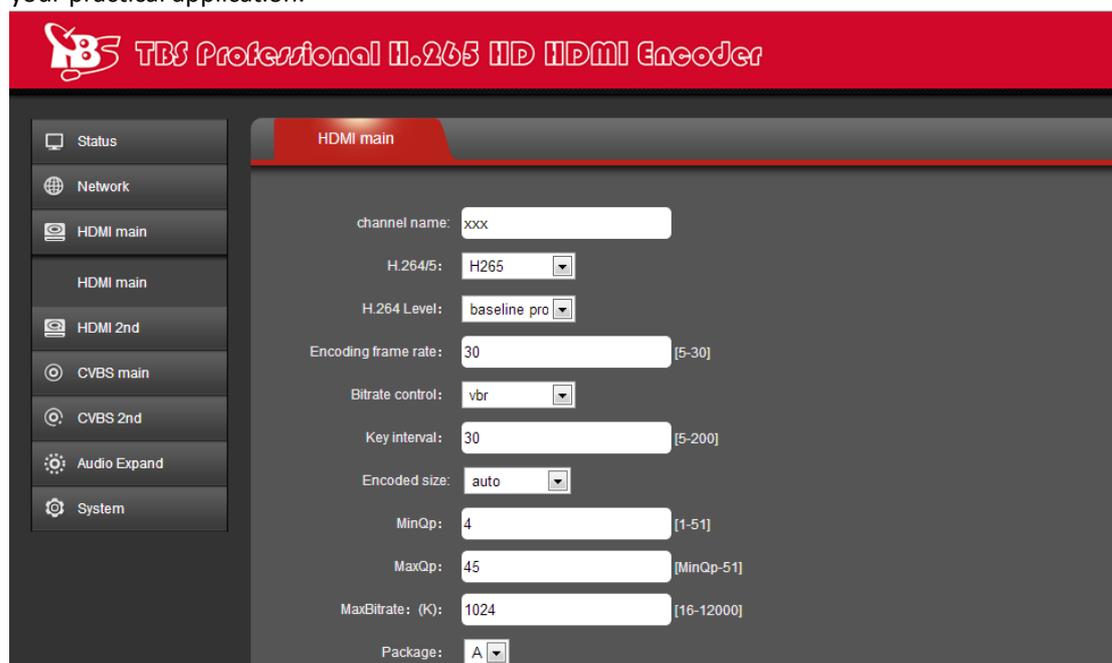

An 'Apply' button is located at the bottom of the configuration fields.

** Reset and Initialization:

Press the RST button for 10 seconds to reset and initialize the TBS2603/TBS2630 HDMI Encoder. After reset, TBS2603/TBS2630 will restore factory defaults with IP 192.168.1.168.

3. HDMI Main Stream and HDMI 2nd Stream Setting

> TBS2603/TBS2630 supports both H.264 and H.265. The relative parameters can be set based on your practical application.

The screenshot shows the web interface for the TBS Professional H.265 HD HDMI Encoder. The top navigation bar is red with the TBS logo and the product name. On the left, there is a sidebar menu with options: Status, Network, HDMI main, HDMI main, HDMI 2nd, CVBS main, CVBS 2nd, Audio Expand, and System. The main content area is titled 'HDMI main' and contains the following configuration fields:

- channel name:
- H.264/5:
- H.264 Level:
- Encoding frame rate: [5-30]
- Bitrate control:
- Key interval: [5-200]
- Encoded size:
- MinQp: [1-51]
- MaxQp: [MinQp-51]
- MaxBitrate: (K): [16-12000]
- Package:

> TBS2603/TBS2630 supports protocol of HTTP, RTSP, Unicast IP, Multicast IP, RTP, RTMP and ONVIF. You can choose any of them according to your application.

> After all the parameters are filled in, click button **Apply** to save the setting.

HTTP: /hdmi Enable Format: /hdmi (begin with '/')
 HTTP Port: 8080 [1-65535]
 RTSP: /hdmi Disable Format: /hdmi (begin with '/')
 RTSP Port: 554 [1-65535]
 RTSP TCP: UDP
 unicast IP: 192.168.1.18 Disable
 unicast port: 1234 [1-65535]
 Multicast IP: 239.0.0.1 Disable
 Multicast port: 1234 [1-65535]
 RTP: 192.168.1.18 Disable
 RTP port: 1234 [1-65535]
 RTMP server ip: 192.168.1.18 Disable
 RTMP server port: 1935 [1-65535]
 RTMP user name:
 RTMP password:
 RTMP app name: live
 RTMP stream name: newstream
 ONVIF: Disable
 Apply

3.1 RTMP protocol setting

RTMP server ip: 192.168.1.18 Enable
 RTMP server port: 1935 [1-65535]
 RTMP user name:
 RTMP password:
 RTMP app name: live
 RTMP stream name: newstream
 ONVIF: Disable
 Apply

> H.264/H.265 level

Baseline main / high / profile: If you want support RTMP, you should choose: baseline profile (H.265 only supports baseline profile).

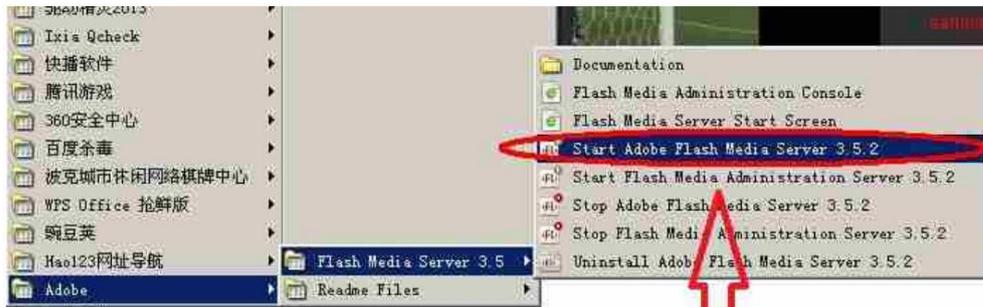

> **RTMP server IP:** Input your corresponding server IP

> **RTMP App Name:** User-defined

> **RTMP stream name:** User-defined

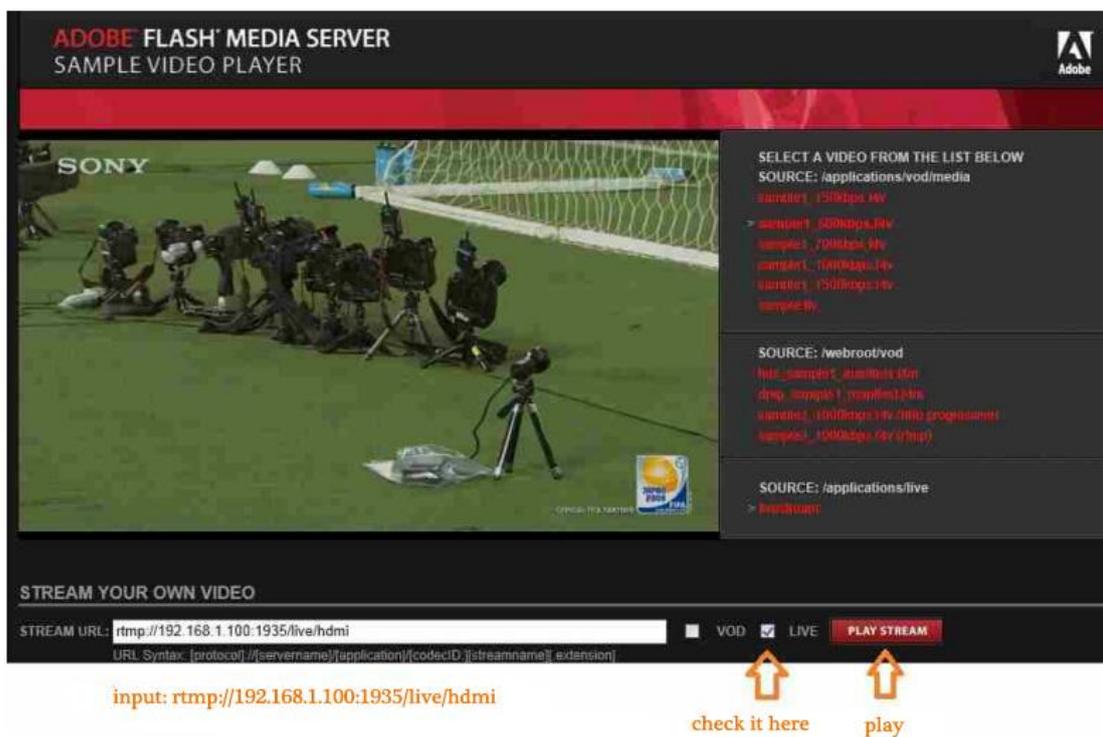

> **Sever Testing:**

- Install the software: Flash Media Server 3.5. There is no need to input series number; both user name and password are 1
- Start the background software

this software runs in background

- Go to folder "FlashPlayer", find "VideoPlayer.html" and open it
- Input: rtmp://ip address/rtmp/hdmi, then choose "live" to see the images, or input rtmp://192.168.1.100:1935/live/hdmi to choose "LIVE", then click "Play stream"

4. CVBS stream setting

TBS2603/TBS2630 does not support CVBS stream.

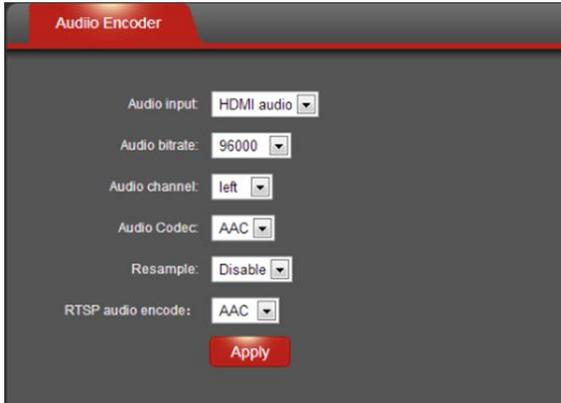

5. Audio Expand

> You can modify "Audio Setting", "HDMI OSD Setting", "CVBS OSD Setting", "HDMI color", "CVBS color" (not available for TBS2603/TBS2630) and "Image Setting" under this section.

> Or you can just keep the default parameter setting without any changes.

5.1 Audio Setting

The screenshot shows the 'Audio Encoder' settings window. It contains several dropdown menus and a button:

- Audio input: HDMI audio
- Audio bitrate: 96000
- Audio channel: left
- Audio Codec: AAC
- Resample: Disable
- RTSP audio encode: AAC
- Apply button

5.2 HDMI OSD Setting

OSD setting will be realized by updating Firmware. So if you have requirement of OSD, please contact TBS support team (Email: support@tbsdtv.com).

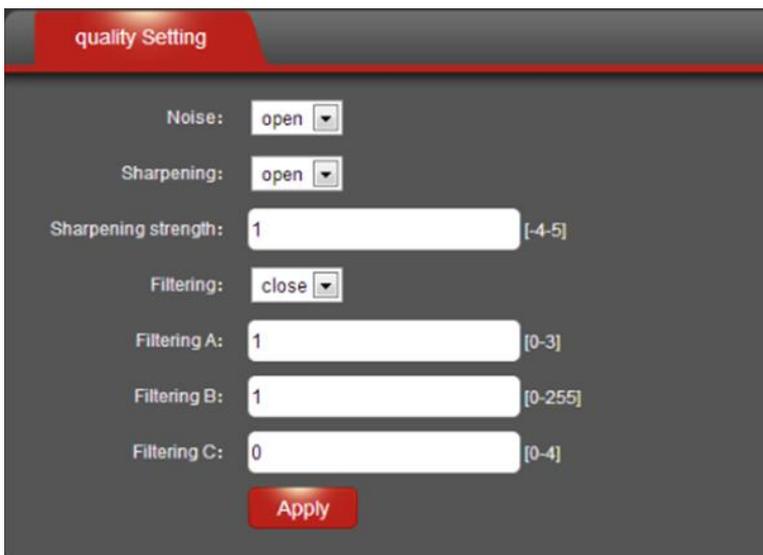

5.3 HDMI color Setting

The screenshot shows the 'HDMI color Setting' window. It contains four sliders and an 'Apply' button:

- Brightness: 12 [0-100] Default value: 50
- Contrast: 11 [0-100] Default value: 50
- Hue: 13 [0-100] Default value: 50
- Saturation: 12 [0-100] Default value: 50
- Apply button

5.4 Image Quality Setting

The screenshot shows the 'quality Setting' window. It contains several dropdown menus and sliders, and an 'Apply' button:

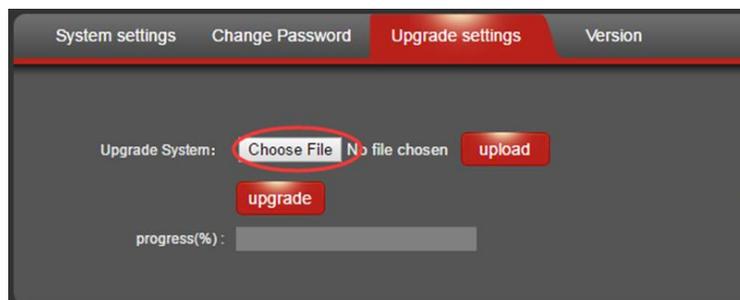

- Noise: open
- Sharpening: open
- Sharpening strength: 1 [-4-5]
- Filtering: close
- Filtering A: 1 [0-3]
- Filtering B: 1 [0-255]
- Filtering C: 0 [0-4]
- Apply button

6. System Setting.

> You can reset/reboot the system, change password, and check Firmware version in the section of "System"  System.

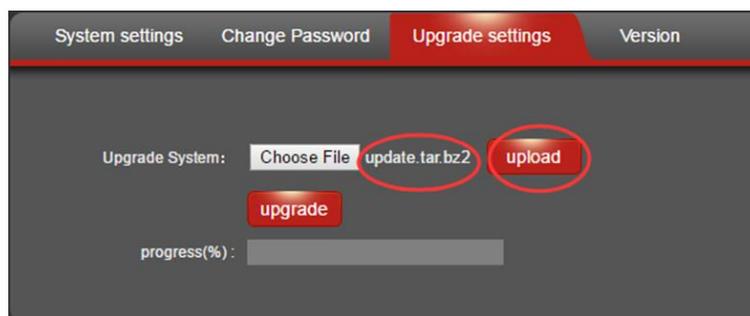

6.1 Upgrade settings

Step 1: Click button "Choose File" to select the updating file in your computer.

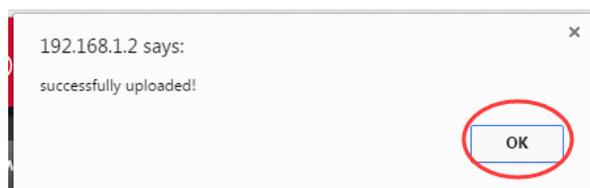

Step 2: Click button "upload" after the file name shown in front of button "upload".

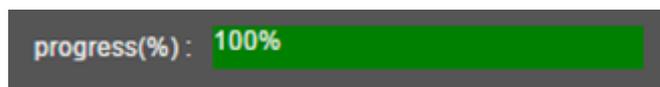

Note: If software file name is not shown, it means it is not selected successfully. Please choose file again.

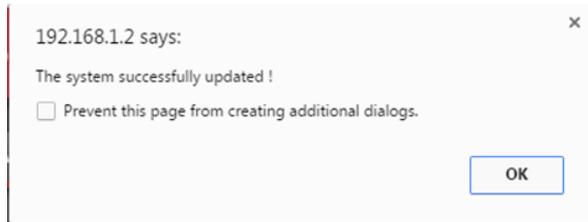

Step 3: If the file is uploaded successfully, you will find a prompt pop up as below, then please click "OK" to continue.

Step 4: Click button "upgrade" to start software updating. Updating status will be shown during the whole process.

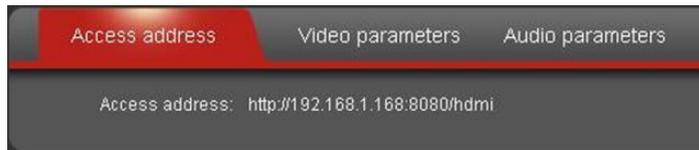

Step 5: If upgrade is successful, you will see a window pop up "The system successfully updated", and then please click "OK" to finish the Firmware update.

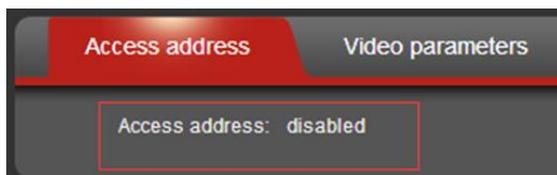

7. Status

After HDMI main stream setting and HDMI second stream setting are done, you will be able to see the Video/Audio status in the “Status” section.

> Access Address: it can be directly copied to the VLC player software for decoding.

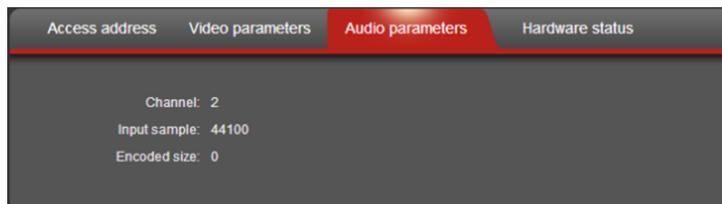

Note: If you found "Access address: disabled" as the below picture, it means the Streaming configuration is not correct. Please check and reset it.

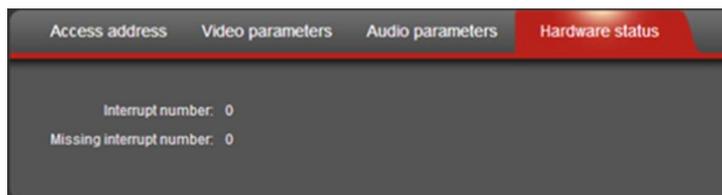

> Video parameters: Display video signal parameters that being input in.

> Audio parameters: Display audio signal parameters that being input in

> Hardware status: If it displays as 0, it means there is no video input, then you need to check the input signal.

..... END.....
